HKS is far from the target...  
→ Yield drastically decreases  
(roughly 1/5;  
solid angle  $\frac{1}{4}$  , K survival ratio 0.8)

Comparing to the previous  
HKS experiment

Q1

Pre- and post-chicanes for the beam are feasible?  
If yes  $\rightarrow$  Q2 (next page)

Possible??:

$Q_2$

- $d \sim 1.7$  m
- $\theta_{eK} = 3\text{--}10$  deg
