# Light intensity which relates to NPE as a function of the wavelength

Water absorption, transmittances of acrylic window and PMT window, and PMT Quantum efficiency were taken into account. The reflectance of a Tyvek sheet was not considered here.

## Assumption:

- ✓ Particle: 1.3 GeV/c  $\pi^+$
- ✓ Cherenkov light path length:  $35 / \cos \theta_C$  [cm] at  $y=0$  cm.

# y-dependence

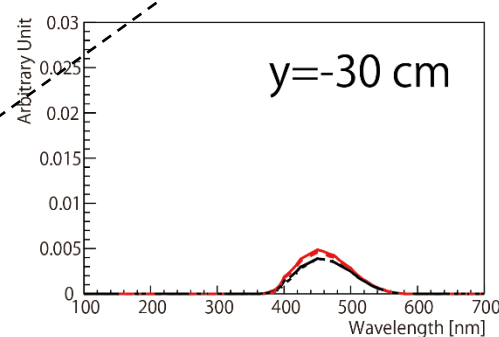

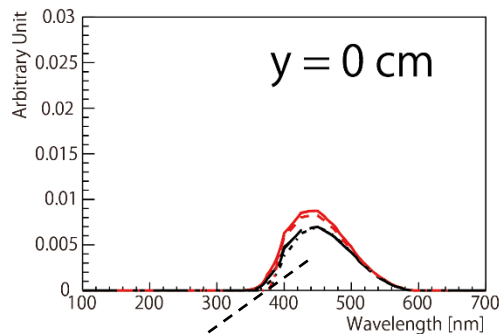

*Not only NPE itself but also the y-dependence changed depending on a configuration and water absorption spectrum (purity of water).*

Exp.1の方が  
H7195 vs. H7195UVの違いを再現

# まとめ

1. 水の純度とももの組み合わせによって挙動が変わる。
2. Exp.2で $\gamma$ 依存性は理解できるが、  
H7195とH7195UVのNPE違いはExp.1の方が再現しているように見える。
3. 水の純度的に(Exp.2寄りの)Exp.1とExp.2の間くらいか？
