

nnl Λ and Σ BG analysis

strategy

This may come from AI.

—————→ I want to estimate this contribution

- AI kinematics and AI data ———→ Estimate whether the side-band BG estimation is good or not.
- If not, I need to get a scale factor to adjust the real BG and side-band BG
- H kinematics and AI data ———→ Compare Λ and Σ with this AI BG
I don't know whether AI AC BG should subtract.
